From Previous Claude Fix (not yet fix) :

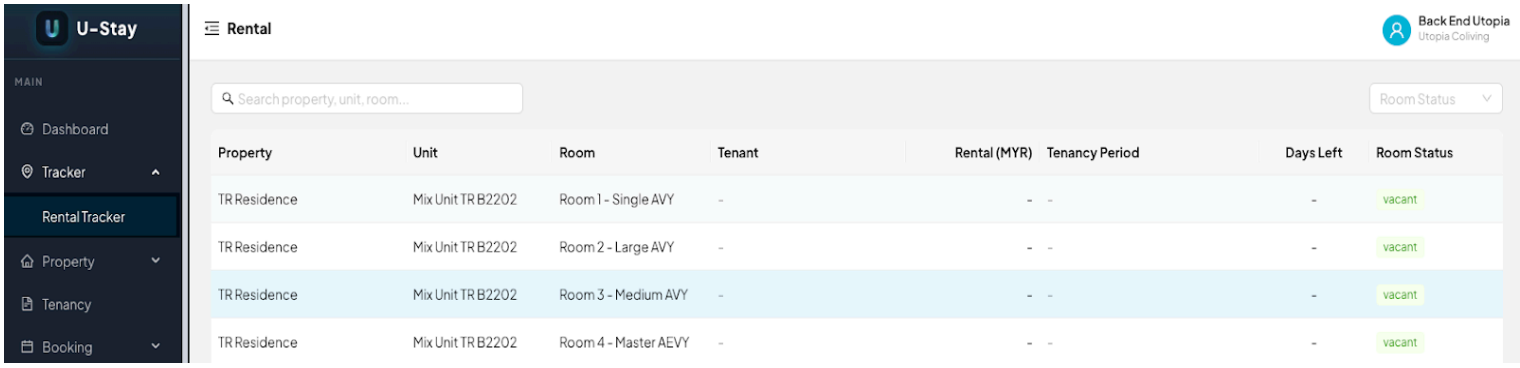
1. **Rental tracker : need to have property view of tracking**
2. **Add units under manage unit and room : to enable action to add units**

Rental Tracker

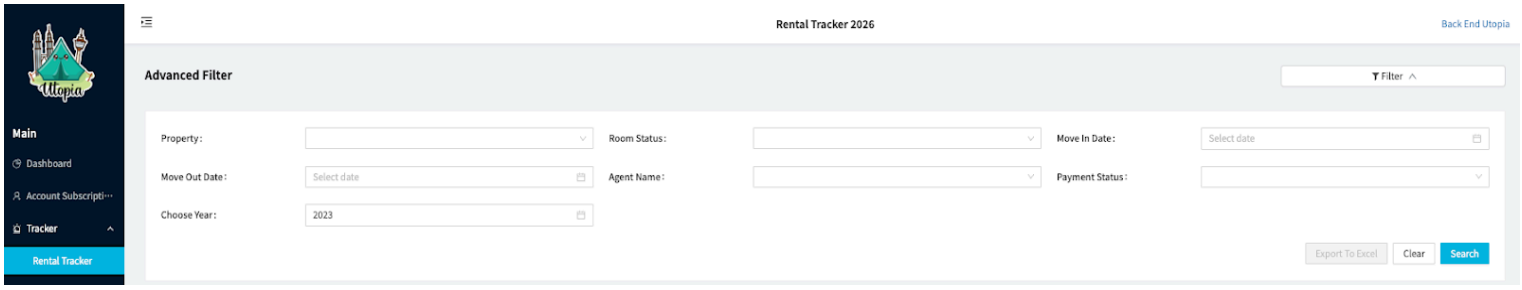
What Works ✅

- Top left filtering works fine (search keyword and search result accurate)
- Top right filtering works fine (able to filter based on room status ; occupied, vacant, etc)

1. Rental tracker bugs still not yet fixed - need to have proper view of the tracking (unit/room, tenant name, tenancy duration, months etc) [FROM PREVIOUS CLAUDE FIX]



2. To optimise filter options for rental tracking - ***varies smart filtering*** options/selections based on property, agent (to let team flup easily with PIC if required)

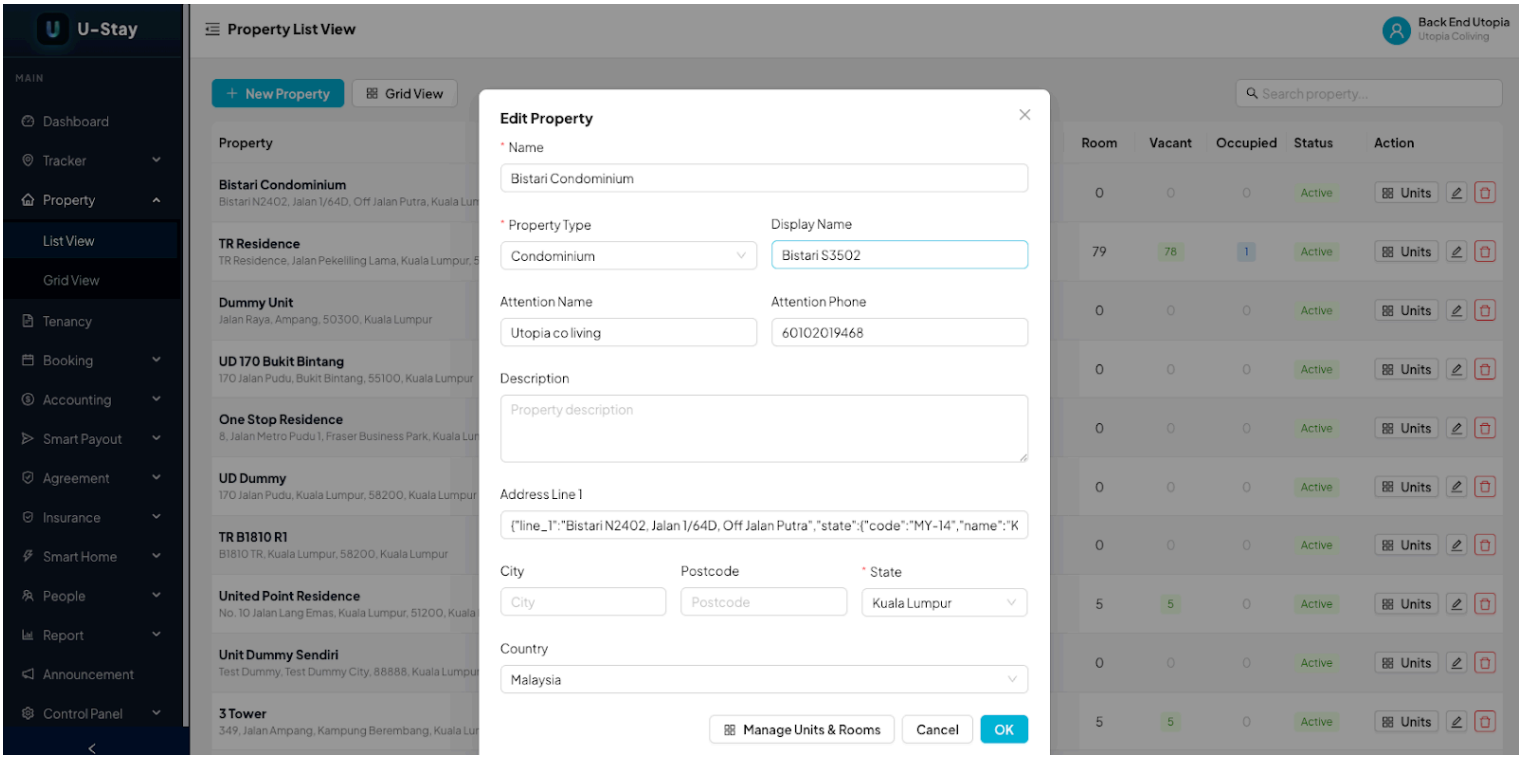


Property | List View

What Works ✅

- Top right filtering works fine (property search keyword & search result accurate)

1. Unable to add units under Manage Units & Rooms, when Address Line 1 is edited display is fine but details didn't change as it is not being saved in the system [FROM PREVIOUS CLAUDE FIX]
    - Remove : attention name and attention phone (since we have no building managers)
    - Remove : display name and description (unnecessary columns)
    - Indicate : unit under Utopia (direct management) or JV project (owner sub management - state name (beneficiary)), new agent/CS team might have difficulties to differentiate units for first few periods



Property | Grid View

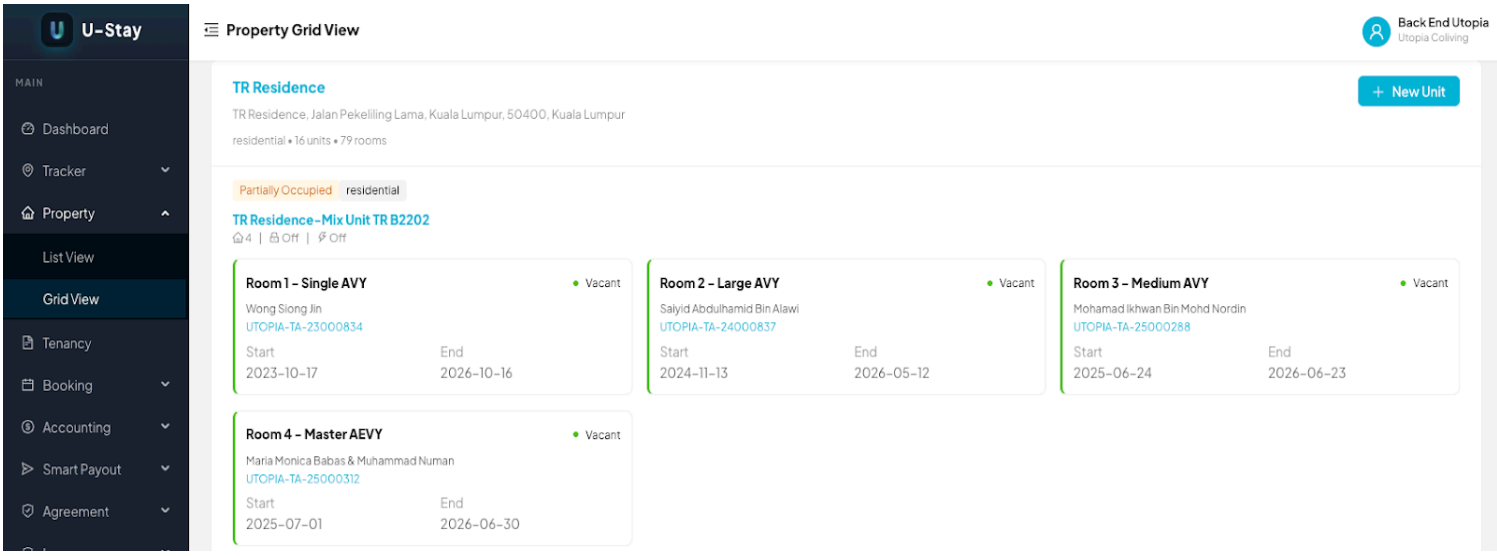
What Works ✅

- Top right filtering works fine (property status, search keyword & search result accurate)

1. To clean up grid view interface - :
    - Remove : options to add new unit, redirect all unit management (add, delete, edit at list view - to push for centralised settings)

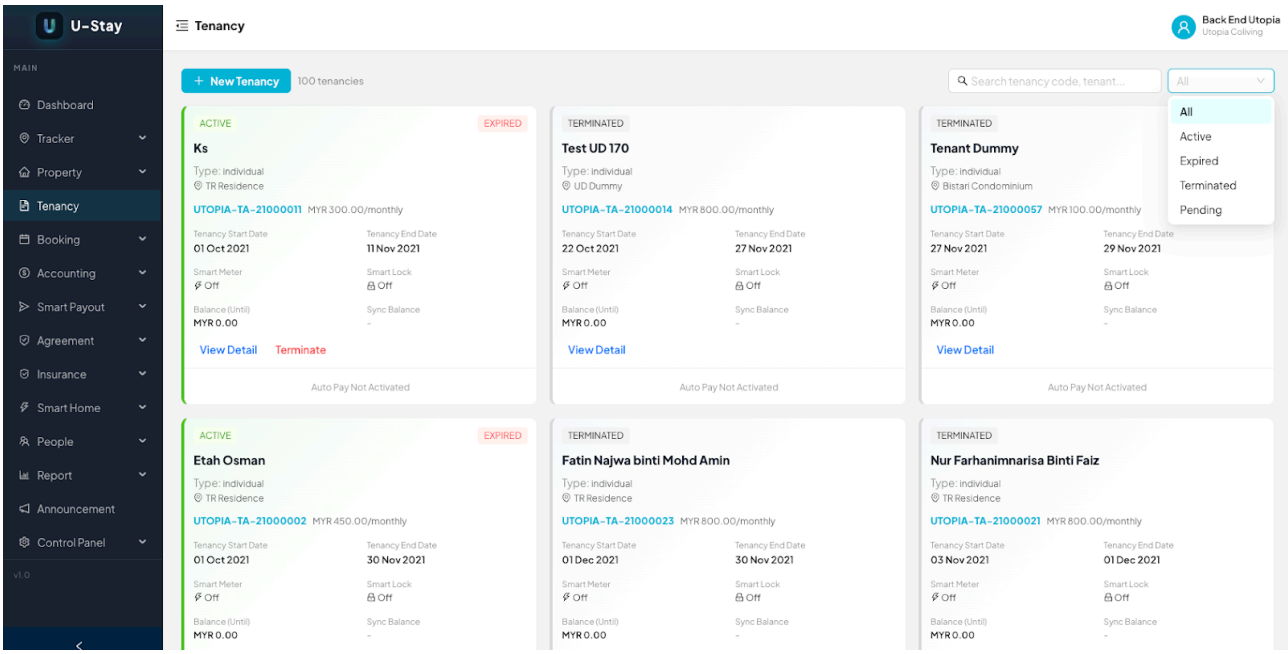
    - Amend : grid view property display descriptions, one glance all-you-need-to-know format. Eg : Property Name (Address, No Of Units, Rooms, *Carparks*) > Units > Units Descriptions (Management Of (Utopia/JV), Type (Residential/Carpark)

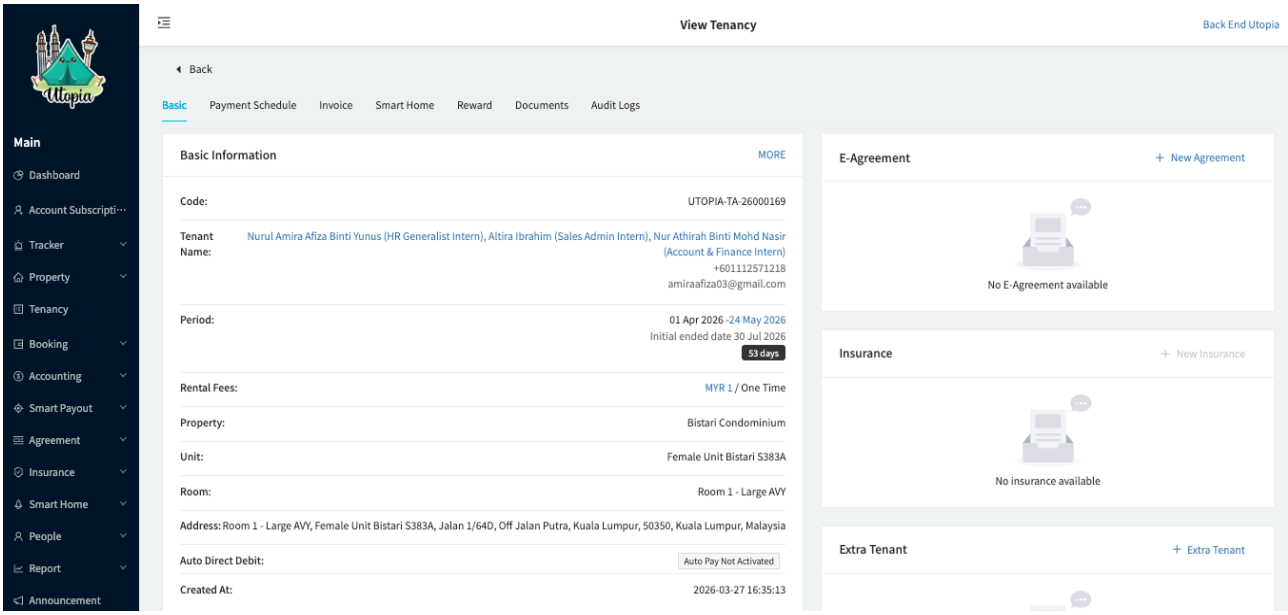
**carpark remarks will help to demolish the usage of Parking Sheet and to provide accurate room numbers as current in ibilik+ carpark unit logs is counted as room along with the actual room number records*



Tenancy

1. Always set Active tenancies on default - sort tenancy according to Property > Units similar interface under Property > List View (better and cleaner display)
    - Fix : filtering system - unable to filter accurately. Tenancy must be sorted out according to status (Active, Expired, Terminated)
    - Fix (2) : To enable (View Detail) - when tenancy card / tenancy code is clicked supposed be able to redirect to elaborated details
    - Amend : state clearly tenant's residing property and room
    - Remove : tenant type at tenancy card as well as the column during tenant registration
    - Remove : option to add new tenancy > agreement creation will fall under Booking





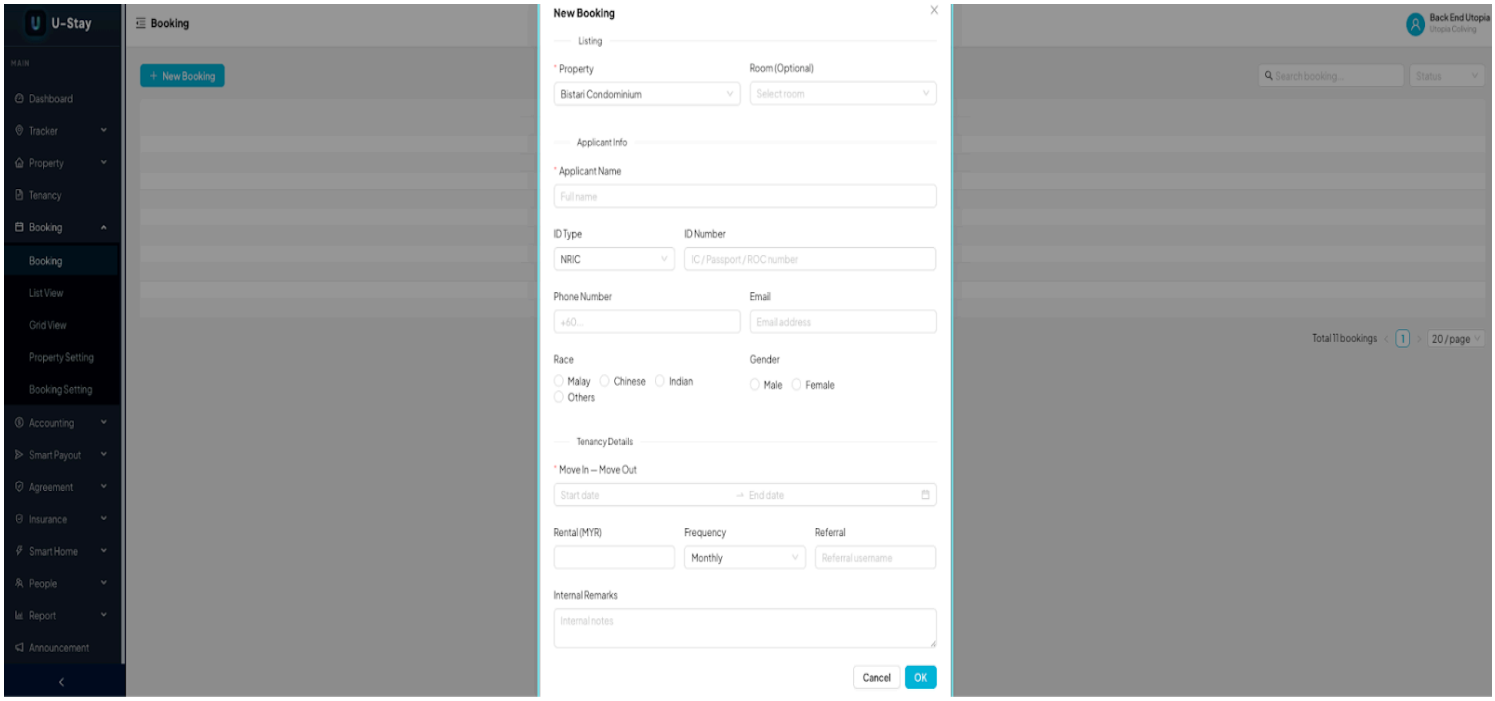
Booking

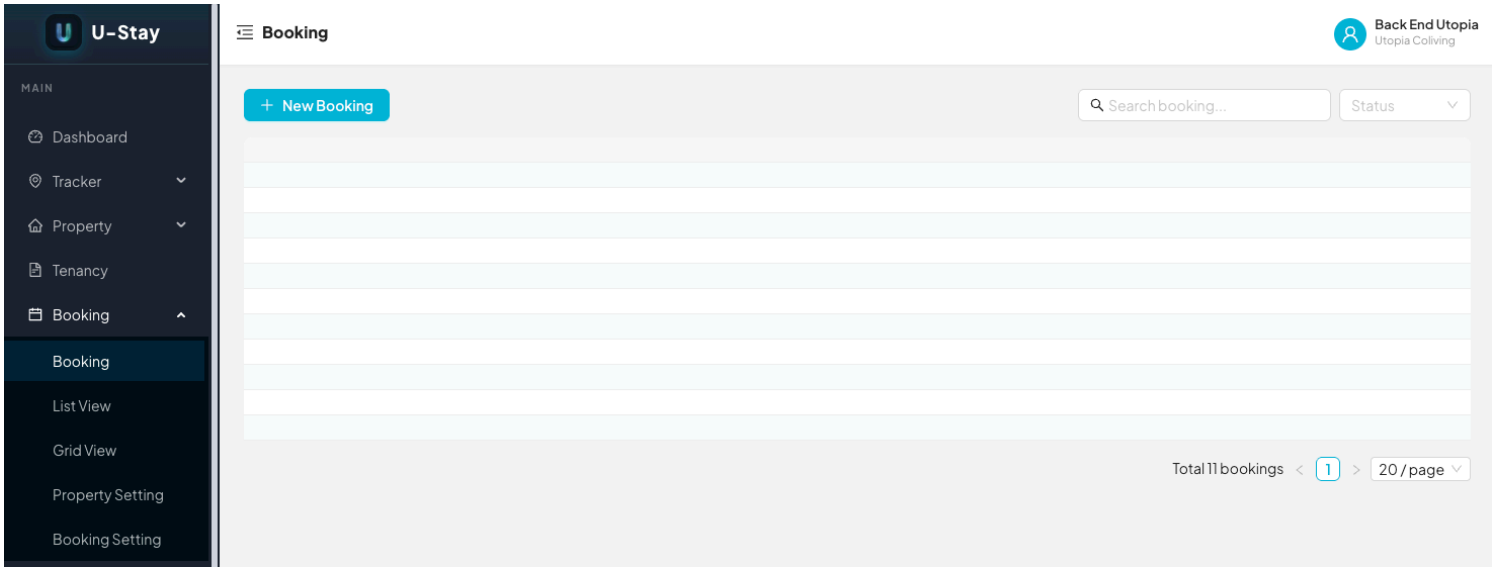
1. To ensure tenant details completely filled in during Booking procedures (tenant name, tenant NRIC/passport, nationality, phone number (same phone number for apps login) email address (same email address for apps login), current address, emergency contact)
    - Remove : Discard Tenancy Details section (Move In Date - Move Out Date, Rental Amount, Rental Frequency and Referral)
    - Amend : Add Booking Payment Details (Total move in, booking amount to be paid, balance payment) - *this to ensure first move in invoice details are always updated by agent and fully paid by tenants (administration and commission related)*
    - Amend : Add Agent/PIC section

Flow Logic :

- ➔ Tenant confirm room > agent to do Bookings
- ➔ Agent direct fill in Tenant details (data will sync for Agreement creation as well) > Invoice for Booking auto created > Booking paid > Will auto create for balance payment
- ➔ Booking Paid > Trigger for Room status change from Vacant to Booked
- ➔ Booking tab (complete with tracking columns for better tracking) > proceed to Agreement creation

New UI/UX to add for Booking tracker : Header (Tenant Name, Property/Unit/Room, Booking Payment Status, Full Payment Status (status Complete/Paid > tenant has complete move in), Agent (Agent to flup with tenant until move in procedure is complete) Action : create e-agreement)



2. To clean up Booking menu bar - remove redundant / unnecessary menu selection (remove : list view, grid view, property setting) :


Remarks : Booking setting can keep but need to improvise and push for centralised setting - eg : default booking amount, move in fee rate etc
