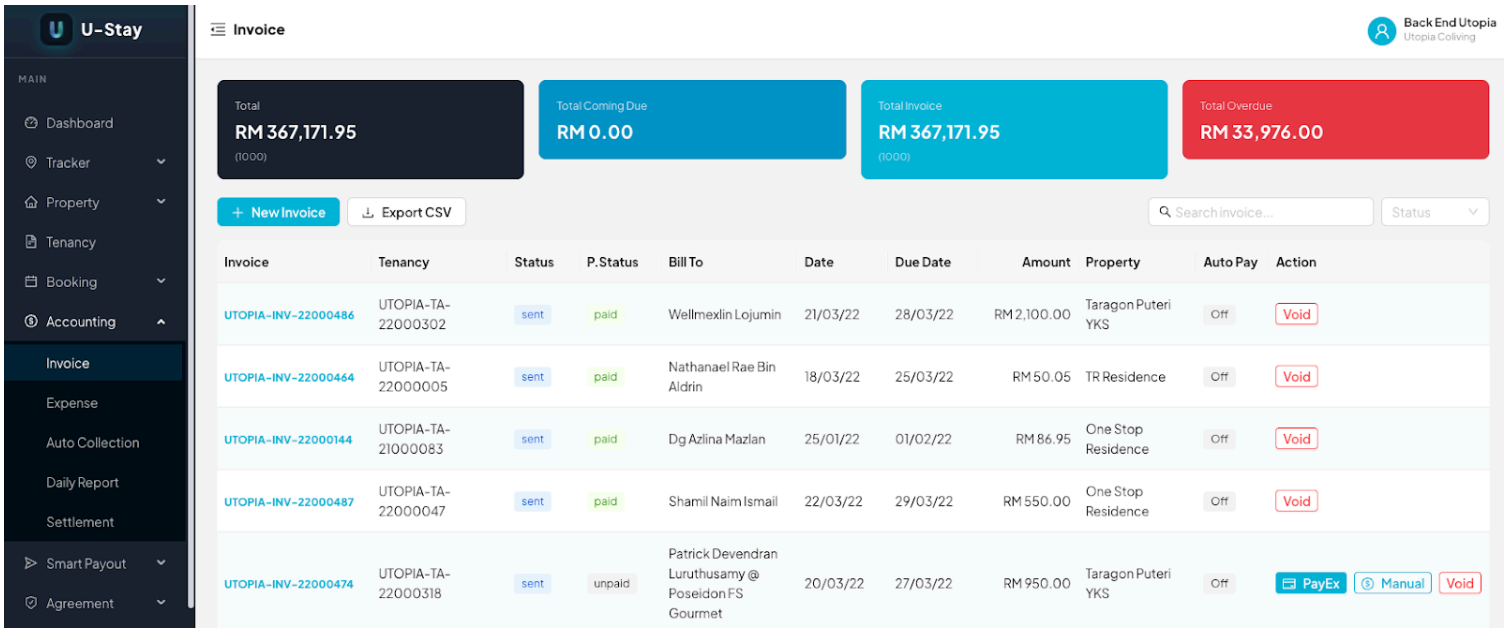
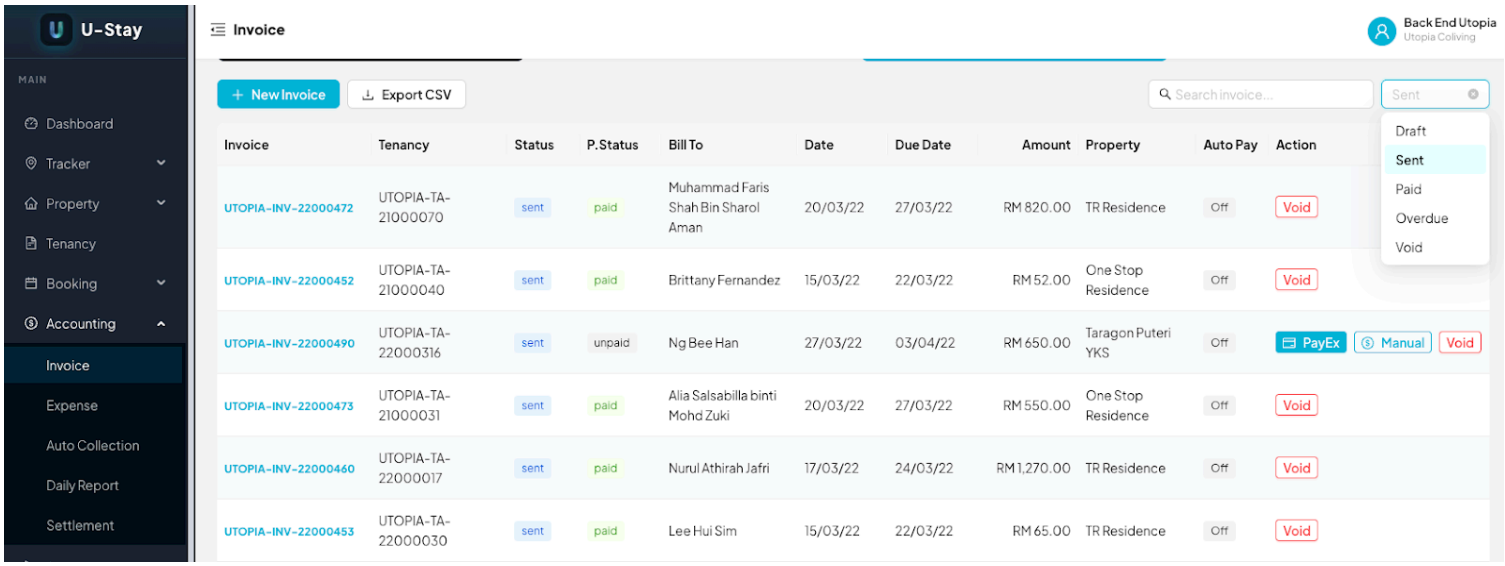
Accounting

1. To always keep current months invoice (date and due date) on default display - current is displaying all-time invoices and need to sort to see :
    - Ensure header cards size are all same/symmetrical (Total, Total Coming Due, Total Invoice, Total Overdue)
    - Froze view for header cards so that it won't go missing when user scroll down
    - Froze view for invoice details header (Invoice, Tenancy, Status, P. Status, Bill To, Date, Due date, Amount, Property, Action)
    - User can still look at past months invoice - sort by date/months to filter (cleaner look and neater tracking system)



2. Enable user to click on Tenancy code and redirects to Tenant payments profile, current is not clickable (only display invoices that status is Confirmed)
    - Remove : Status column (invoice status indicator : Confirmed/Draft) & Auto Pay status column
    - Amend : Payment status (Draft, ~~Sent~~ > Coming Due, Paid, Overdue, Voided)
    - Amend : Sort invoice range A-Z (earliest > latest of current month)



3. To optimise invoice actions section :
    - Remove : PayEx options since this is user interface - we don't make payments for the invoices issued.
    - Fix : Current manual button toggle invoice knock off directly. Supposedly : user click Manual > go into Invoice > manual key in Payment > invoice knock off
    - What Works : Void button works, after user click Void pop up confirmation (Void/Cancel)

4. Demolished auto collection, daily report, settlement and replace with Payex integration, here's why :
    - Feedback from account team ; current display hard to navigate compared to Payex - simple and direct
    - Unless we can mirror the Payex display (
